HEADLINE FINDINGS

A growing channel with an unusually engaged audience

The channel has published **88 videos** analyzed in this report, generating **14,739 views** and **717 likes** in total. The average engagement rate (likes + comments as a share of views) is **12.06%**, with a median of **9.87%** — the gap between the two indicates a small number of videos with unusually high engagement pulling the average up. Viewership over the last 90 days grew **82.8%** versus the prior 90 days, and the channel has added a net **94 subscribers** (116 gained, 22 lost) across the observed period.

Key observations

- **Geography:** IN accounts for 92.72% of all views — audience is heavily concentrated in a single market.
- **Traffic:** SHORTS is the dominant discovery channel at 54.64% of views, meaning distribution currently depends on one surface.
- **Best-performing category:** People & Blogs videos average 233 views across 6 videos, the highest of any category with a reliable sample size.
- **Duration vs. engagement:** correlation of 0.233 — a mild positive relationship; longer videos trend slightly more engaging.
- **Recency effect:** correlation of -0.209 between video age and views/day — older videos accumulate views more slowly per day, as expected.

Views nearly doubled in the last quarter

Daily channel views — last 12 months (7-day rolling average)

What's working — and what isn't

Top 5 videos by engagement rate

Video	Engagement
Science City Kolkata full video walkthrough	42.3%
Unboxing a budget laptop — specs review	41.5%
Durga Puja pandal tour 2022	33.3%
"Words and Their Impact" — success mindset	33.3%
Trampoline park shorts	30.0%

Bottom 5 videos by engagement rate

Video	Engagement
"Thinking Like a Data Analyst" — career series	0.0%
PL-300 Power BI certification prep	0.0%
Kolkata to Bagdogra flight journey	0.8%
Manali trip vlog	1.1%
Trampoline / #cityofjoy short (2,459 views)	1.3%

Insight: the highest-view Short in the dataset (2,459 views) has one of the *lowest* engagement rates of any video analyzed. Reach and resonance are currently two different things on this channel — a signal worth acting on rather than optimizing away.

Top 10 videos by total views

The ten most-viewed videos are dominated by short-form, high-reach content (trampoline shorts, travel clips, and local landmark features), consistent with the channel's heavy reliance on the Shorts discovery surface.

AUDIENCE & DISTRIBUTION

One country, one platform surface — concentrated but consistent

Views by country (top 10)

Views by traffic source

Left: top 10 countries by views. Right: share of views by traffic source.

92.72% of views come from India, and **54.64%** arrive via the Shorts feed. This reflects strong product-market fit in a single market and content format — but it also means the channel's growth is currently tied to two dependencies: one country's audience and one discovery surface. A shift in either could meaningfully move the numbers in either direction.

What this suggests

- If international growth is a goal, localized titles and thumbnails could open non-IN markets currently underrepresented.
- Cross-promotion via community posts, playlists, and end screens would reduce reliance on the Shorts algorithm alone.
- If the IN + Shorts strategy is working, doubling down deliberately (rather than by default) is a valid choice too.

The audience that does speak up, loves it

Across 88 videos, 106 comments were scored using VADER lexicon-based sentiment analysis, 96.2% were positive, 3.2% neutral, and 0.6% negative. Audience sentiment is overwhelmingly positive, suggesting the current content style resonates well with the (small but engaged) commenting audience.

Overall, the low comment volume (106 across 88 videos) is low relative to total views. Adding explicit calls-to-action could grow both the engagement rate and the volume of signal available for future sentiment and topic analysis.

RECOMMENDATIONS

Five moves to compound this growth

1 Double down on People & Blogs

It has the strongest average views per video among categories with sufficient sample size — test more videos in this category to confirm the signal.

2 Diversify traffic sources

Beyond SHORTS (54.64% of views) to reduce platform dependency risk — cross-promote via community posts, playlists, and end screens.

3 Decide on India vs. global

Expand beyond IN (92.72% of views) with localized titles/thumbnails if international growth is a goal, or lean further into the IN audience if not.

4 Reverse-engineer top performers

Investigate the highest-engagement videos for common traits — topic, hook, thumbnail style — and replicate those patterns in upcoming uploads.

5 Surface positive sentiment

Sentiment is strongly positive — consider surfacing top positive comments in community posts or video descriptions to reinforce engagement.

6 Grow the comment signal

Comment volume (106 across 88 videos) is low relative to views — add explicit calls-to-action to improve engagement rate and future analysis.
