Executive Summary — Video, Engagement & Sentiment Analysis

88

Videos analyzed

14,739

Total views

12.06%

Avg. engagement

+94

Net subscribers

1. Headline Findings

The channel published 88 videos analyzed in this report, generating 14,739 views and 717 likes in total. The average engagement rate (likes + comments as a share of views) is 12.06%, with a median of 9.87% — the gap indicates a small number of videos with unusually high engagement pulling the average up. Viewership over the last 90 days grew 82.8% versus the prior 90 days, and the channel added a net 94 subscribers (116 gained, 22 lost) across the observed period.

- **Geography:** IN accounts for 92.72% of all views — audience is heavily concentrated in a single market.
- **Traffic:** SHORTS is the dominant discovery channel at 54.64% of views — distribution depends on one surface.
- **Best category:** People & Blogs videos average 233 views across 6 videos, the highest with a reliable sample size.
- **Duration vs. engagement:** Correlation of 0.233 — a mild positive relationship; longer videos trend slightly more engaging.
- **Recency effect:** Correlation of -0.209 between video age and views/day — older videos accumulate views more slowly, as expected.

2. Engagement & Trend Analysis

Daily channel views (7-day rolling average), last 12 months.

3. Audience, Traffic & Sentiment

Views by traffic source

Comment sentiment (n=106, VADER)

96.2% of scored comments are positive, 2.8% neutral, and 0.9% negative — audience sentiment is overwhelmingly favorable toward the current content style.

4. Recommendations

- **Double down on Shorts in Travel & Events** — this is your engine. It's your strongest category/format combination and your top acquisition channel. Commit to a consistent posting cadence here rather than splitting effort across weaker categories like Science & Technology or People & Blogs.
- **Fix the conversion gap between views and subscribers.** Views are up 82.8% and Shorts are pulling huge volume, but sub growth isn't keeping pace. Add explicit calls-to-action — a subscribe prompt, a pinned comment, “watch more like this” — into the Shorts themselves.
- **Investigate subscriber churn as a diagnostic, not just a metric.** 22 lost subscribers during a traffic spike is a signal worth tracing: pull up the Videos tab, find which video(s) drove the spike, and check whether churn clusters around them. That tells you if you're attracting the wrong audience or just a mismatch between spike content and core content.
- **Use the long-form data point as a hypothesis, not a pivot.** One long video hit 4.5% engagement (above median) — that's a signal to test with 2-3 more long-form travel vlogs, not a reason to abandon Shorts.
- **Tighten titles for search, not just discovery feeds.** Pair hashtags with a real descriptive hook (“Kolkata to Bokaro Road Trip | Full Vlog”) to capture YT Search traffic — already your second-best source — alongside For You/Shorts traffic.
- **Localize for your core market.** With 92.7% of views from India, test Hindi/regional titles, thumbnails, and on-screen text. Treat Bangladesh, Pakistan, and Nepal as low-risk expansion tests given cultural/linguistic overlap.
- **Put the 96.2% positive sentiment to work.** Feature glowing comments or shoutouts in videos/community posts — this builds trust with new viewers and directly supports fixing the churn problem in #3.
- **Move now, not later.** Views are up and engagement is beating median — this is the window to ship a follow-up video/series while algorithmic interest is still elevated, rather than waiting to perfect the strategy first.

Methodology

Video-level metrics from merged YouTube Data API + Analytics exports (88 videos). Channel-level daily/geography/traffic figures reflect a separate reporting export and are not joined to individual videos. Sentiment scored with VADER (lexicon/rule-based), suitable for short, informal text such as YouTube comments.
