Videos analyzed

14,739
Total views

12.06%
Avg. engagement

+94
Net subscribers

1. Headline Findings

The channel has published 88 videos analyzed in this report, generating 14,739 views and 717 likes in total. The average engagement rate (likes + comments as a share of views) is 12.06%, with a median of 9.87% — the gap between the two indicates a small number of videos with unusually high engagement pulling the average up. Viewership over the last 90 days grew 82.8% versus the prior 90 days, and the channel has added a net 94 subscribers (116 gained, 22 lost) across the observed period.

- **Geography:** IN accounts for 92.72% of all views — audience is heavily concentrated in a single market.
- **Traffic:** SHORTS is the dominant discovery channel at 54.64% of views, meaning distribution currently depends on one surface.
- **Best-performing category:** People & Blogs videos average 233 views across 6 videos, the highest of any category with a reliable sample size.
- **Duration vs. engagement:** correlation of 0.233 — a mild positive relationship, longer videos trend slightly more engaging.
- **Recency effect:** correlation of -0.209 between video age and views/day — older videos accumulate views more slowly per day, as expected.

2. Engagement & Trend Analysis

Daily channel views with 7-day rolling average, last 12 months.

Left: distribution of engagement rate across all videos. Right: duration vs. engagement rate.

3. Audience & Distribution

Left: top 10 countries by views. Right: share of views by traffic source.

4. Comment Sentiment Analysis

Across 106 comments scored using VADER lexicon-based sentiment analysis, 96.2% were positive, 2.8% neutral, and 0.9% negative. Audience sentiment is overwhelmingly positive, suggesting the current content style resonates well with the (small but engaged) commenting audience.

Comment sentiment breakdown (VADER compound score thresholds: positive ≥ 0.05 , negative ≤ -0.05).

5. Recommendations

- **Double down on People & Blogs** content — it has the strongest average views per video among categories with sufficient sample size, and consider testing more videos in this category to confirm the signal.
- **Diversify traffic sources** beyond SHORTS (54.64% of views) to reduce platform dependency risk — cross-promote via community posts, playlists, and end screens.
- **Expand beyond IN** (92.72% of views) with localized titles/thumbnails if international growth is a goal, or lean further into the IN audience with more targeted content if not.
- Investigate the highest-engagement videos (Section 2) for common traits — topic, hook, thumbnail style — and replicate those patterns in upcoming uploads.
- Sentiment is strongly positive; consider surfacing top positive comments in community posts or video descriptions to reinforce community engagement.
- Comment volume (106 across 88 videos) is low relative to views — adding explicit calls-to-action for comments could improve both engagement rate and the volume of signal available for future sentiment/topic analysis.

Methodology: video-level metrics from merged YouTube Data API + Analytics exports (88 videos). Channel-level daily/geography/traffic figures reflect a separate reporting export and are not joined to individual videos. Sentiment scored with VADER (lexicon/rule-based), suitable for short, informal text such as YouTube comments.
